

## Workgroup week 7: preparation & assignment

**General info:** Workgroup week 7 is about the Ethics Case and is scheduled on Thursday, 18<sup>th</sup> Oct.

### Preparation for the Workgroup:

1. Read the Ethics Case (see Canvas).
2. Read the Networked System Guidelines; see Canvas or <http://networkedsystemsethics.net/>  
As these Guidelines are quite long it is advised not to read everything, but only those parts that you may use in your case, plus of course the general introduction (that is until page 6 of the PDF on Canvas).
3. With your student-group: search, discuss and finally select a case for the Ethics Case.  
Obvious criteria for selecting the case are: you find the case interesting and there are ethical aspects related to the case.  
Take note: all examples shown in the lectures, that are about ethics in the Data Science domain, are possible candidates for the case.

### Assignment in the Workgroup:

- With your student-group: discuss a broad approach for the Ethics Case. Eg.
  - o which aspects of the NSE-guidelines to use for the analysis,
  - o how you divide the work in the group,
  - o assessment on how to collect data about the case (eg. what type of articles are available?)
  - o etc
- During the workgroup, I intend to spend ~5 minutes per student group about the status of the case. Specific questions, doubts etc can be shared here.
